

# PHOTO TIPS

- Always hold your phone horizontally (parallel to the floor).
- Don't zoom in too close, you will need to be able to crop the photo.
- Look at the surroundings. Are there chairs in the forefront? Shadows in the background?
- Is there glare? Glasses, windows, mirrors.
- Lighting - Make sure there's lighting in front of you.
- Shadows - if the object is partly in the light and partly in the shadows, the picture won't turn out well.
- Angles and levels - don't be afraid to move to a different viewpoint, bend down or lift the camera up. Angles make a big difference in your pictures!
- Steady hand - use a stand or prop if needed. If you are moving, you will capture blurred images.
